Heuchera PRIMO® 'Wild Rose'

PPAF CPBRA F

(Coral Bells) This easily distinguishable Heuchera stands out with its large leaves and bright, uniquely colored foliage. 'Wild Rose' forms a dense habit of large, bright rosy purple leaves with deep charcoal gray veining. The prominent dark veining really causes the foliage color pop, making it a great choice for shade. This is the perfect companion plant to the dark-leaved 'Black Pearl'. Upright, dark burgundy rose flower scapes have matching dark buds that open to rosy pink flowers. The New PRIMO™ Collection differs from the DOLCE® Heuchera collection in that they are large and faster growing in the landscape.

Height: 8-10in Spread: 18-2in Zones 4-9
